

Pre-Release Features

In this section

Overview

This section explains how to use *3Delight for Maya* features that are still in development.

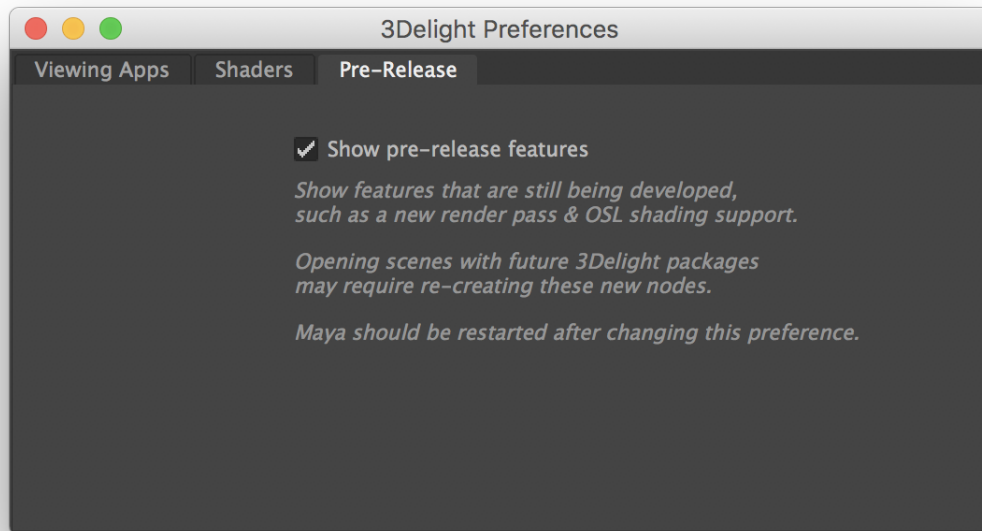

What to expect

In a nutshell: some bugs. Also, possible issues when updating your *3Delight* installation later down the road. In other words, you might need to re-create pre-release nodes for a given scene after updating your *3Delight* installation.

We would really like to get your feedback regarding these features. There is a forum to discuss them here (link coming soon). You can also contact us by email.

Enabling Pre-Release Features

Pre-release features are hidden by default. They can be shown by changing a preferences setting.

The Pre-Release tab of the 3Delight Preferences window.

- Bring up the *3Delight Preferences* window either by:
 - choosing the *3Delight Preferences...* menu item, or
 - clicking on the *Prefs* button of the *3Delight Shelf*.
- Select the *Pre-Release* tab.
- Enable the *Show pre-release features* setting.
