# Render Settings

The 3Delight tab in the Cinema4D Render Settings window

The options defining the objects to render, rendering quality and image layers to produce are all contained as attributes of *3Delight Render Settings* nodes.

Render Settings Attributes

The rendering options are grouped into the following categories:

Quality – Settings related to image quality (filtering, sampling, etc.).
Output – Settings related to where send rendered images or NSI files (display, file, etc.).
Image Layers (AOVs) – Specifies the image layers (AOVs) to output, including Multi-Light output.
Overrides – Specifies overrides to various settings to obtain quick interactive renders.

Rendering the Scene

See Rendering with 3Delight for more information about the rendering modes and how to start a rendering.
