

Installation

Installing 3Delight^{NSI} consist of downloading the package (available [here](#)) and running the installer. Once this is done, the plugin is automatically loaded in Cinema 4D, and the plugin files are into the %Delight%/cinema4d directory.

System Requirements

Cinema 4D version: R24, R25

Operating systems: Windows, macOS

Once *3Delight for Cinema 4D* is loaded in Cinema 4D, you can use 3Delight menu to add [3Delight Menu and Shelf](#) into Cinema 4D. That will make it easier to render using 3Delight or to create materials and lights. The free 3Delight^{NSI} does not require a licence file, but if you are running the paid version and you have no license file installed, you will have a watermark in the image when you render. Installing a license file is explained in [Configuration](#).
